

1- Php.init

Add :

```
zend_extension = "C:\xampp\php\ext\php_xdebug.dll"
```

```
xdebug.remote_enable=1
```

```
xdebug.remote_port=9000
```

```
xdebug.profiler_enable=1
```

```
xdebug.profiler_output_dir="C:\xampp\tmp"
```

```
zend_extension = "C:\xampp\php\ext\php_xdebug.dll"
```

```
xdebug.remote_enable=1
```

```
xdebug.remote_port=9000
```

```
xdebug.profiler_enable=1
```

```
xdebug.profiler_output_dir="C:\xampp\tmp"
```

2- Restart apache

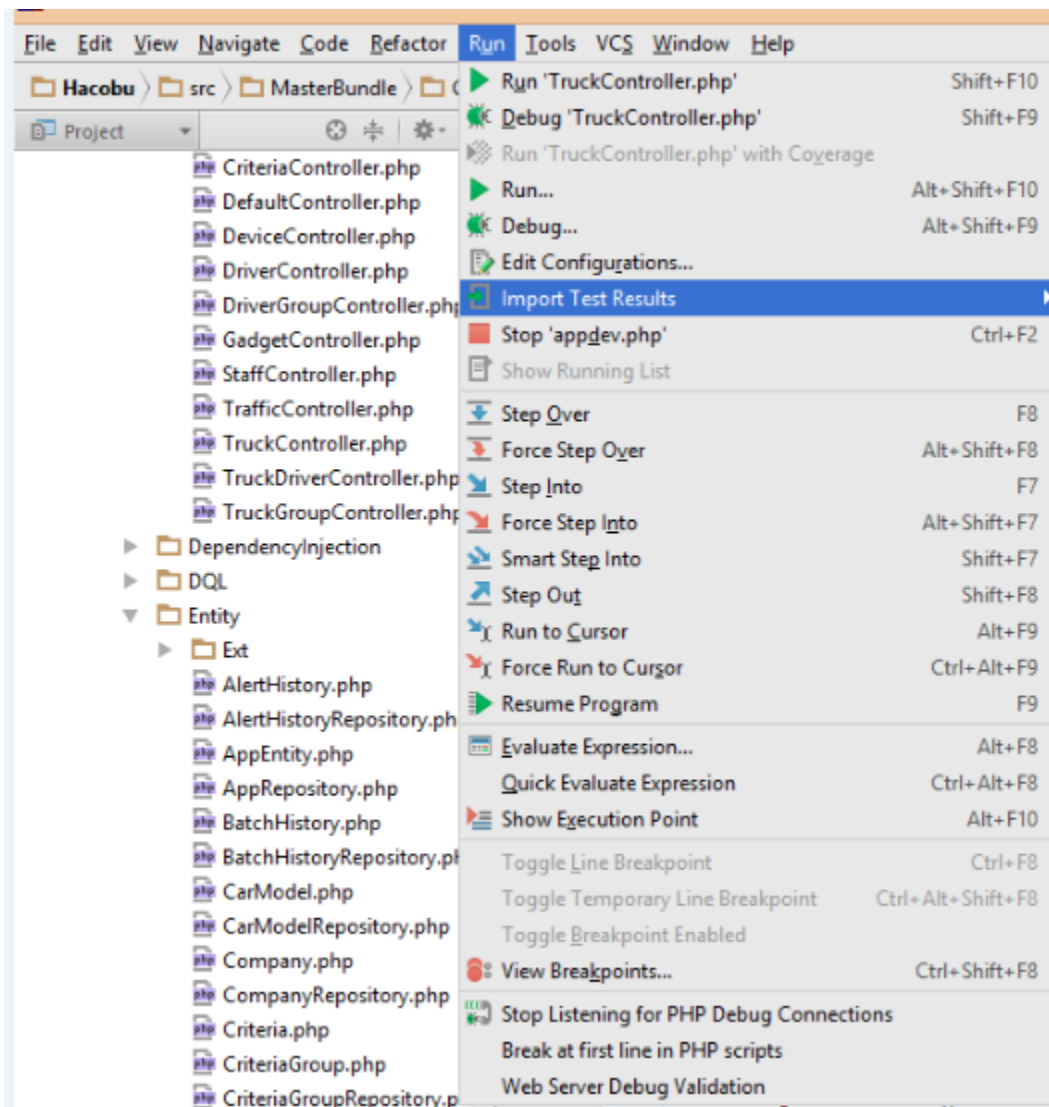

3- Google chrome :

Extensions:

	<b>Xdebug</b> 2.7 Xdebug Client <a href="#">Details</a> <input type="checkbox"/> Allow in incognito	<input checked="" type="checkbox"/> Enabled	
	<b>Xdebug helper</b> 1.4.3 Easy debugging, profiling and tracing extension for Xdebug <a href="#">Details</a> <a href="#">Options</a> <input type="checkbox"/> Allow in incognito	<input checked="" type="checkbox"/> Enabled	

4- In phpstorm

☐ Allow in incognito

# Xdebug helper

Easy debugging, profiling and tracing

## Introduction

First install and configure [Xdebug](#), then set your IDE key below. Now tell Xdebug to debug, profile or trace by clicking the little bug in the addressbar:

-  Debugging, profiling & tracing disabled
-  Debugging enabled
-  Profiling enabled
-  Tracing enabled

 Love hotkeys? Try Ctrl+Shift+X

## IDE key

Select your IDE to use the default sessionkey or choose other to use a custom key.

PhpStorm ▾

## Domain filter

By default we show the bug icon on all pages, but here you can whitelist domains where the icon should show up. Note that all filters are regular expressions.
